

I installed the monitoring software PRTG from Paessler AG and configured it to monitor my network infrastructure and my cameras. The monitoring software allowed me to identify the disconnect issue and a problem with PSM.

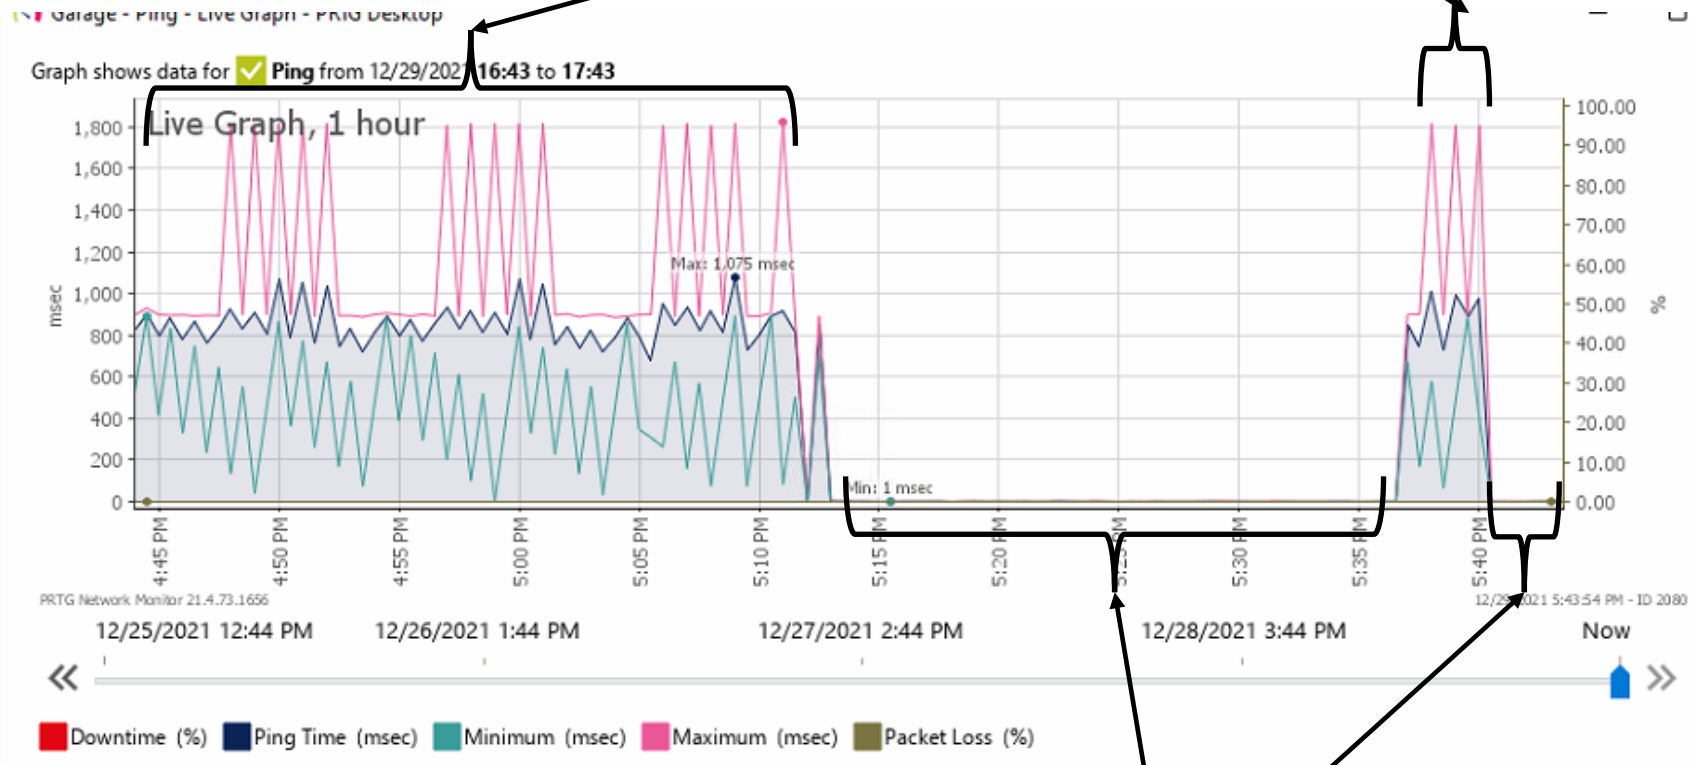

- When camera is not armed
 - Enters Wi-Fi Power Saving Mode (PSM)
 - Ping response times are excessive
 - Disconnects and reconnects from the server every 30 to 35 minutes.
 - When it disconnects and reconnects the night vision lights come on and go off which trigger the other cameras in the area
- When camera is armed
 - Wi-Fi Power Saving Mode is not enabled
 - Ping response times are consistent with the other devices on the network
 - Disconnects and reconnects from the server every 30 to 35 minutes.
 - When it disconnects and reconnects the night vision lights come on and go off which trigger the other cameras in the area

The camera disconnects from the server approximately every 30 minutes regardless if it is armed or not. When armed, the PSM is only enabled during the time it disconnects. The camera is not connected to the server for about 2 minutes during this time. During this period the camera is still connected to the Wi-Fi.
