

My ARLO 6-camera security system

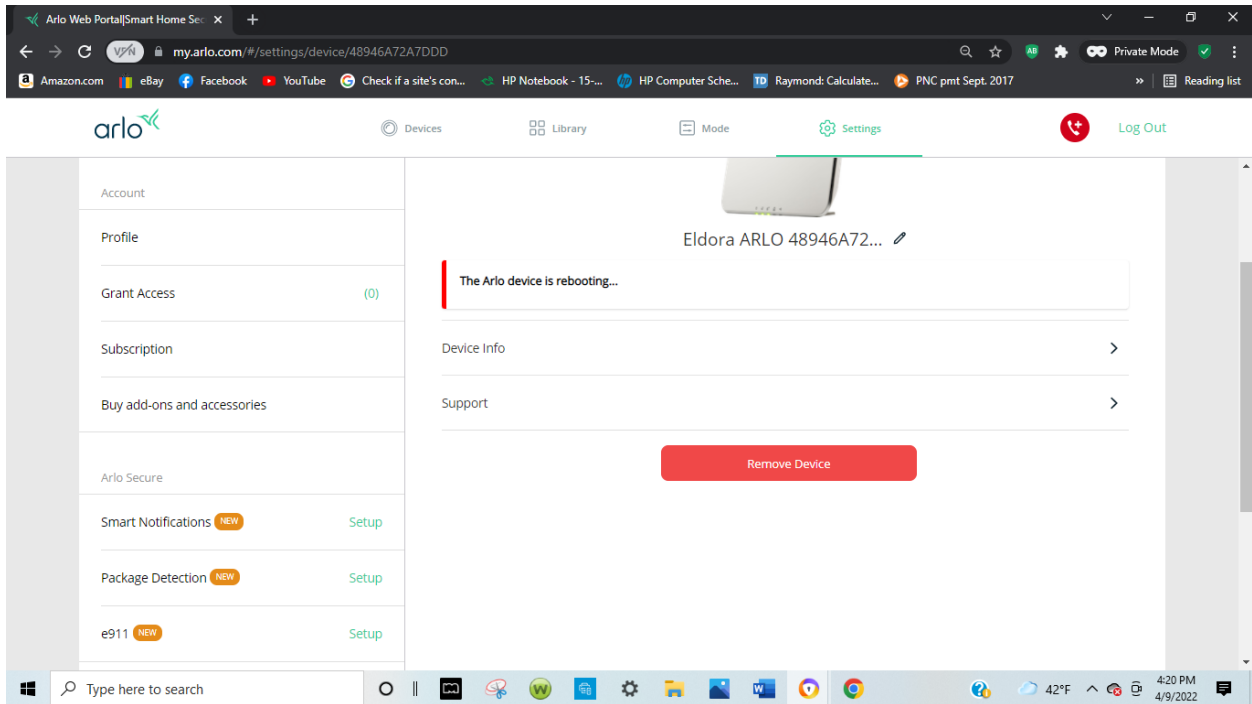

Login shows Front Porch and Side Door cameras are offline...all others are online.

I reboot the Base Station:

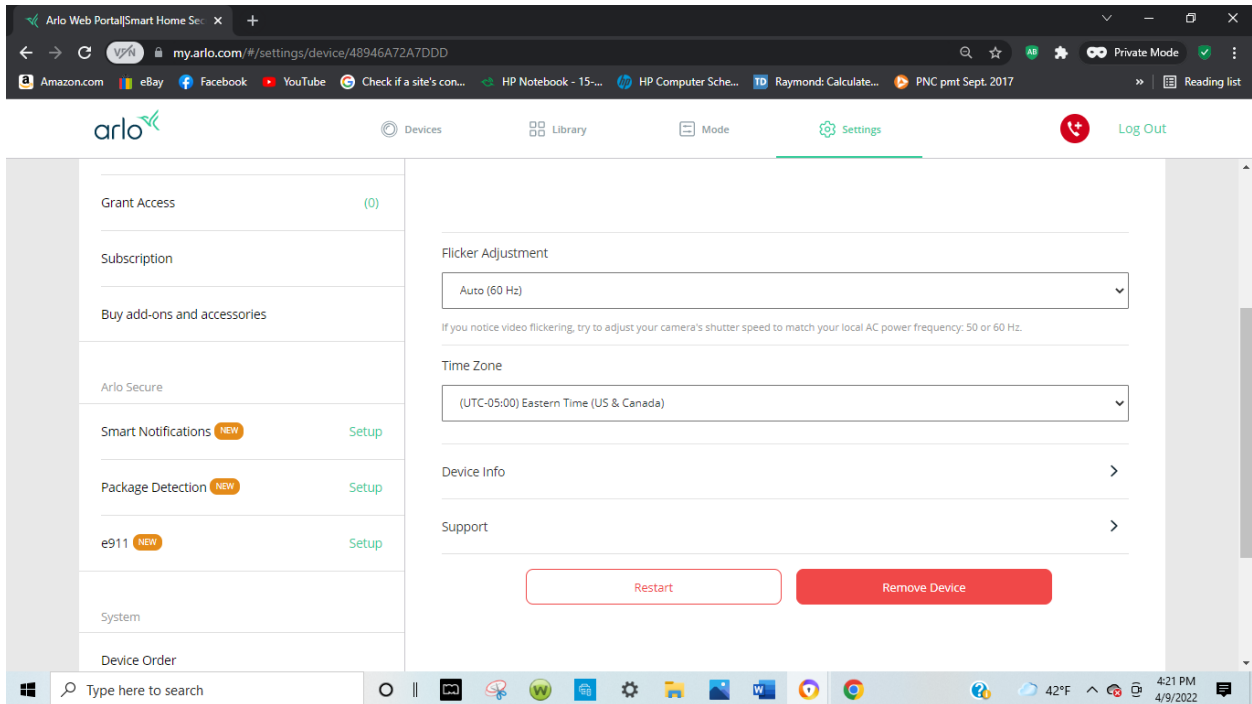

The Base Station is rebooting ...

The screenshot shows the Arlo web portal interface. The top navigation bar includes the Arlo logo, 'Devices', 'Library', 'Mode', 'Settings', and 'Log Out'. The main content area displays the device name 'Eldora ARLO 48946A72...' and a red message box stating 'The Arlo device is rebooting...'. Below this, there are links for 'Device Info' and 'Support', and a red 'Remove Device' button. The left sidebar contains various settings options like 'Account', 'Profile', 'Grant Access', 'Subscription', 'Buy add-ons and accessories', 'Arlo Secure', 'Smart Notifications', 'Package Detection', and 'e911'. The Windows taskbar at the bottom shows the time as 4:20 PM on 4/9/2022.

The Base Station reboot is complete...

The screenshot shows the Arlo web portal interface after the reboot is complete. The main content area displays the 'Flicker Adjustment' setting set to 'Auto (60 Hz)', with a note: 'If you notice video flickering, try to adjust your camera's shutter speed to match your local AC power frequency: 50 or 60 Hz.' Below this, the 'Time Zone' is set to '(UTC-05:00) Eastern Time (US & Canada)'. There are links for 'Device Info' and 'Support', and two buttons: 'Restart' and 'Remove Device'. The left sidebar is the same as in the previous screenshot. The Windows taskbar at the bottom shows the time as 4:21 PM on 4/9/2022.

I return to the DEVICES... the Front Porch and Side Door cameras have come back online, but now the Front Yard camera (*which was online*) is now *offline*...
